

Transportation Solutions

Emergency Notification Ringdown System:

The Sonexis Ringdown line system is an on-premise or cloud hosted solution that provides a secure, easy-to-administer, cost-effective emergency ringdown line system that quickly connects first responders with minimal effort. This unique solution has been designed to the exact guidelines set forth by the FAA and Air Force requirements for Airfield Operations. The system is easily tied into fire company garage doors, on site and remote police and rescue resources and all other required airport

entities. It supports multiple emergency incidents simultaneously on both SIP and PSTN telephony.

Emergency BlastDial Communication System:

With Sonexis Emergency BlastDial, when any individual from a specified Emergency Group dials a static emergency number, the Sonexis System recognizes that number and immediately triggers a BlastDial call to the other members of that Group. Sonexis Emergency Communications uses BlastDial to quickly connect first responders in an audio conference. In the event of an emergency, it is critically important to get a group of emergency responders together on a conference call as quickly as possible with minimal effort. When an emergency occurs the first responder picks up a dedicated phone which instantly creates a conference and triggers a blast dial - out to other members of the response team. When each team member is called they can be joined directly to the emergency conference in progress.

- **Supports unlimited number of emergency groups**
- **Connects emergency personnel simultaneously**
- **Up to (3) phone numbers per-person**
- **Automatic call recording and storage**
- **No user input to initiate Emergency BlastDial**
- **System can BlastDial up to (200) personnel within a group**
- **Multiple deployment options (On-Premise, Cloud, Managed)**

Sonexis Emergency Communication Solutions bring rapid ROI and Industry best TCO. By leveraging existing investments in infrastructure and technology, Sonexis utilizes as much preexisting equipment as possible. The system can integrate with your existing PBX or be 100% PBX agnostic. Likewise, if there is limited IT Support or minimal on-net traffic, Sonexis also offers our solutions to be managed in our cloud offering as well.

Incident & Crisis Management:

In the wake of threats made to transportation infrastructures worldwide, incident and crisis management systems are becoming critical platforms to initiate first responder actions as well as manage the full life cycle of crisis. Response teams are often designated before-hand, or during the event and are placed in control of the organization while the incident is dealt with. An incident is an event that could lead to loss of, or disruption to, an organization's operations, services or functions. If not managed effectively an incident can escalate into an emergency, crisis or a disaster.

Sonexis Airport Emergency Plan System:

The Sonexis Emergency System has been designed to the guidelines set forth by the FAA and Air Force requirements for Airfield Operations. The system is easily tied into fire company garage doors, on site and remote police and rescue resources and all other required airport entities. It supports multiple emergency incidents simultaneously on both SIP and PSTN telephony.

Sonexis Emergency Conferencing uses Blast Dial to quickly connect first responders in an audio conference. In the event of an emergency, it is critically important to get a group of emergency responders together on a conference call as quickly as possible with minimal effort. When an emergency occurs the first responder picks up a dedicated phone which instantly creates a conference and triggers a blast dial - out to other members of the response team. When each team member is called they can be joined directly to the emergency conference in progress.
